EXPERIENCE

Research Assistant, Physics and Astronomy — From Feb 2026

San Jose State University | Advisor: Dr. Hilary Hurst

- Extended Dr. Hurst's Python and NumPy code for spinor Bose-Einstein condensate simulations.
- Ran Slurm batches and retained JSON records and HDF5 outputs with source revisions and random seeds.
- Documented the simulation logic with Jupyter notebooks and diagrams.

Supplemental Instructor, Computer Science — Jan - Jun 2024

Modesto Junior College | MESA Program

- Tutored students in programming and data structures. Helped them troubleshoot Linux and virtual machines.

PROJECTS AND COURSEWORK

Reachy Mini Robot Console — Jun - Jul 2026

Personal robotics and systems project

- Built a browser-based controller for the Reachy Mini, hosted on a headless Jetson Orin Nano.
- Fixed silent audio after an OS migration by tracing ALSA device mappings and PipeWire volume settings.

2D Ising Model Simulation — Apr - May 2026

SJSU computational physics coursework

- Simulated the 2D Ising model with Metropolis Monte Carlo, checked small lattices by hand, and wrote up the phase-transition results.

Advanced Experimental Physics Laboratory — Fall 2025

SJSU coursework

- Measured Johnson noise and used Hall-effect and four-point-probe measurements to study semiconductor samples.

SKILLS AND COURSEWORK

- Python, NumPy, Jupyter, Matplotlib and HDF5.
- Linux, Bash, Git, systemd, SQLite and Slurm.
- Coursework: UNIX/Linux Systems, Networking, Data Structures and Algorithms, Computational Methods in Physics.

EDUCATION

B.S., Physics — May 2026

San Jose State University | GPA 3.80 | Dean's Scholar, Fall 2024 and Fall 2025

Four Associate Degrees — May 2024

Modesto Junior College | GPA 3.73 | Graduation With Honors

- A.S.-T in Computer Science, Mathematics and Physics; A.A. in Language and Rationality.
